SOFTWARE ENGINEERING

github.com/arowoloisaac | arowoloisaacabiodun01@gmail.com | arowolo.vercel.app

PROFESSIONAL SUMMARY

Software Engineering graduate with hands-on experience building scalable APIs and responsive full-stack web applications. I've spent my studies and personal time delivering end-to-end projects and refining my problem-solving skills. I'm a versatile developer who thrives on both team collaboration and healthy competition, and I'm seeking a junior software engineering role to apply my problem-solving skills.

EDUCATION

Tomsk State University

2021 - 2025

Major: Software Engineering | Bachelor of Science

Offa Grammar School

2016 - 2019

High School Diploma

SKILLS & ABILITIES

Programming Languages: C#, Python, Typescript, JavaScript, SQL, HTML5, CSS3, C++

Frameworks: .NET Core WebAPI, FastAPI, React, Vue.js, Flask

Database: MySQL, MSSQL, PostgreSQL Supabase, MongoDB, Redis

Tools & Libraries: Shadcn/UI, Motion, Tailwind CSS, Bootstrap, Quartz, EF Core, SQL Alchemy, JWT, Swagger, Scalar, React Router, Vite, Docker, Postman

Others: Software Architecture, Requirements gathering and Analysis, Software testing and debugging, Architectural patterns, Data structure and algorithms, Git, Vercel, Heroku, Object Oriented Programming (OOP)

Characters: Problem solving, Leadership, Communication, Collaboration, Exploring, Adaptability

Hobbies: Reading, Writing, Table Tennis, Football, Chess, Basketball, Baking, Running, Jujutsu, Painting

EXPERIENCE

Software Engineer | Intern

2024

- Designed, documented and Implemented a secure web-based system for tracking physical keys
- Allowed authorized users to checkout/ return keys, set access permissions and receive overdue alerts
- Features real-time dashboard reporting for admins
- Built with React, Typescript, C#, .NET WebAPI, Quartz, Background jobs and MSSQL

PROJECTS

Bank Account System

- Developed a console-based banking application for managing user accounts
- Enabled deposits, withdrawals, balance inquiries and transaction history
- Implemented a secure authentication and overdraft protection
- Built with C#, Console Application, Object-Oriented design patterns and memory-based persistence

Ordering System

- Designed and Implemented a scalable ordering platform
- Allow customers to browse products, place and track orders, rate products and manage profiles
- Enabled admins to process orders, add/delete/retrieve/updates products and generate reports
- Built with React, Typescript, C#, JWT, .NET WebAPI, and MSSQL

Food Delivery System

- Designed and Implemented a secure backend API for food delivery system
- Let customers browse menus, place & track orders and rate services
- Allows restaurants to perform operations on menus and delivers to accept/update deliveries
- Implemented role manager to track current user roles and permissions
- Built with C#, .NET WebAPI, JWT, Layered Architecture, Quartz, Docker, and MSSQL

School Management System

- Designed, documented and Implemented a full-stack web application for school administration
- Enable students to view enrolled courses, assignments, grades, timetables and assigned lecturers
- Permit lecturers to upload assignments, grades and announcements
- Features a prompt email notification
- Built with Vue.js, JavaScript, C#, .NET WebAPI, JWT, MSSQL, Email Integration, Layered Architecture, Background jobs and Quartz

Project Management System – Final Year Project*

- Designed, documented and Implemented a web-app for projects tracking
- Enable individuals and organizations to perform operations on the system
- Support real-time notification, file sharing and contextual role-based access control
- Built with React, Typescript, Shadcn, C#, .NET WebAPI, Swagger JWT, AWS S3, Pure Monolith Clean Architecture, Quartz, Background jobs, Email integration, Calendar, Gantt, and MSSQL

YOURSEARCH - Ongoing

- Building using React, C#, Scalar, Postgres, Typescript, Domain Driven Design and Modular Monolith
